

Plastic is the main threat for the planet's seas and oceans.

80% of the marine contamination is due to plastic thrown in the oceans.
12 million tons of this material infests our oceans every year.

What can I do to help?

01. Avoid using plastic, especially the ones of one use only.
02. Re use recipients.
03. Re use the recipients following these guidelines:

PLASTIC CONTAINERS
PLASTIC BAGS
TETRABRIKS
CANS AND SPRAYS
PLASTIC OR WHITE CORK TRAYS
METALIC COVERS OR SHETS
ALUMINUM FOIL
PLASTIC POTS
ANY WRAPING
WITH RECYCLING SYMBOL

CD / DVD
PLASTICS THAT
ARE NOT CONTAINERS
TOYS
TEXTIL PRODUCTS
SHOES
NON EMPTY CONTAINERS
TOXIC CONTAINERS

04. Try not to carry plastic on board.
In case you tip over, you will avoid it from falling into the sea
05. Collect any plastics you find floating in the sea and then throw them in the correct garbage container.

As sailors we are responsible
to help our sea to keep healthy!
